

Q.1) write a algorithm and flow chart for check the given no. is even or odd

Algorithm

```
step1: START
step2: Read number form user
step3: cheak number%2==0
        if false goto step 5
        if true goto next step 4
step4: print "number is even"
        goto step 6
step5: print "number is odd
step6: END
```

Q.2) write a algorithm and flow chart for Factorial of a given number.

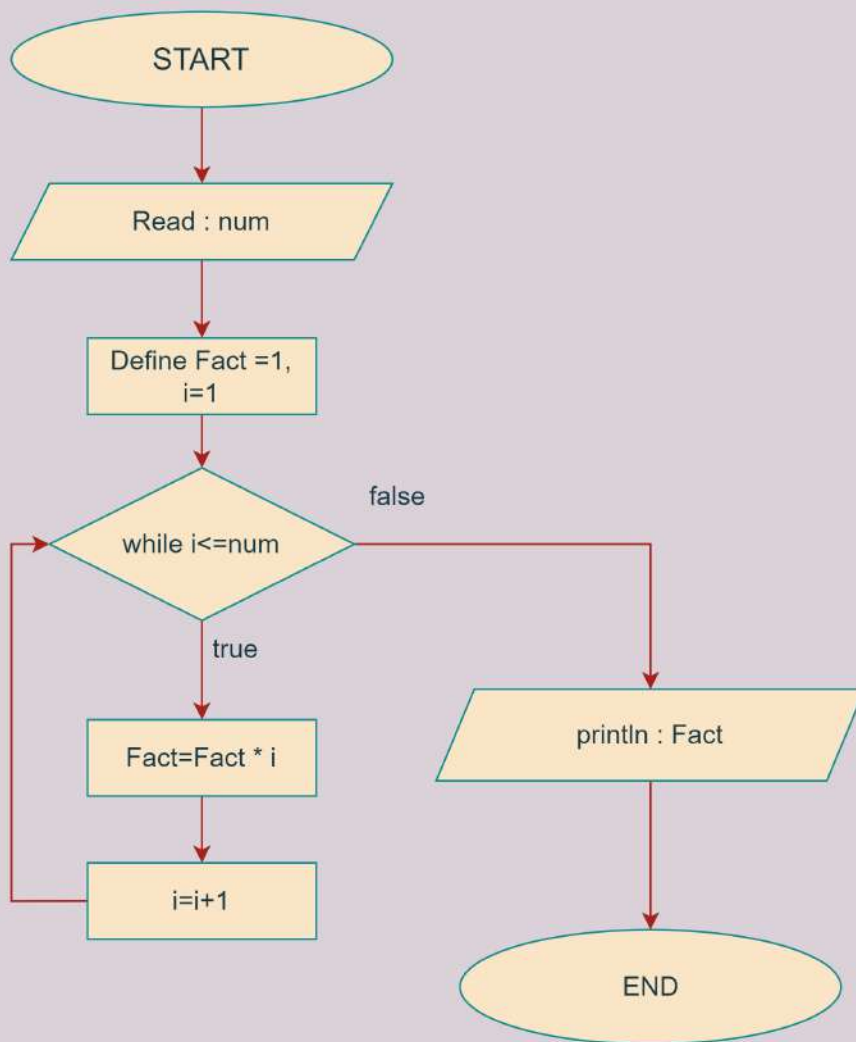

Algorithm

step1: START
step2: Read num=8
step3: Define Fact=1, i=1
step4: check while (i<=num)
if false goto step 7
if true goto next step
step5: Fact = Fact * i
step6: increment i by 1
goto step 4
step7: Println : Fact
step8: END

output=40320

Q.3) write a algorithm and flow chart for Factorial of a number using recursion.

Algorithm

step1: START
step2: Read num
step3: Define Fact=1, i=1
step4: check while (i<=num)
if false goto step 7
if true goto next step
step5: Fact = Fact * i
step6: increment i by 1
goto step 4
step7: Println : Fact
step8: END

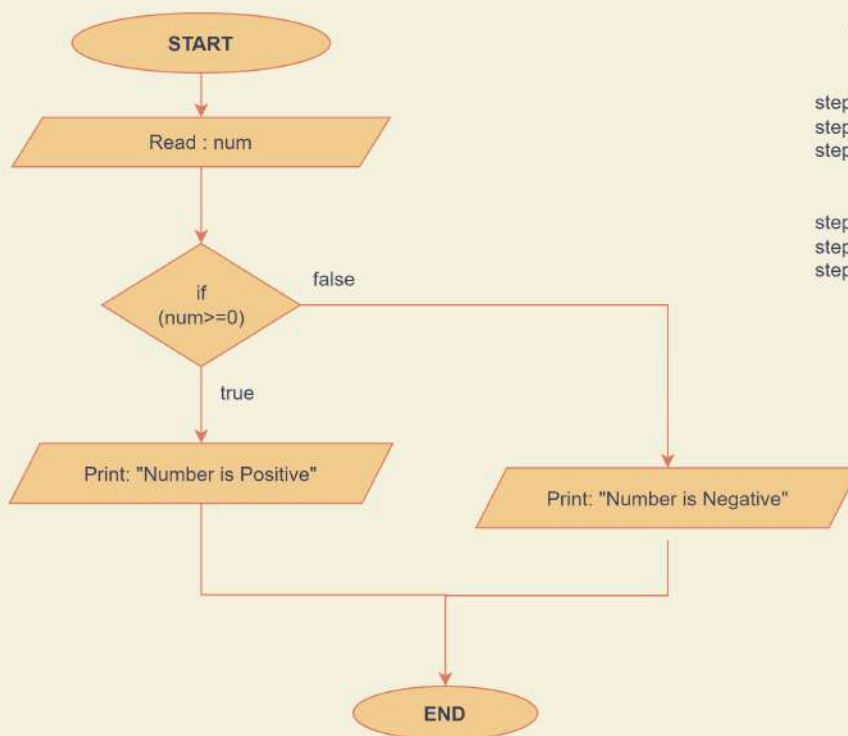

Q.4) write a algorithm and flowchart for Swap two numbers without using the third variable approach.

Algorithm

step1: START
step2: Read n1, n2
step3: Add $n1+n2$ & store in n1
step4: Sub $n1-n2$ & store in n2
step5: Sub $n1-n2$ & store in n1
step6: Print : n1, n2
step7: END

Q.5) write a algorithm and flowchart for check whether the given number is positive or negative.

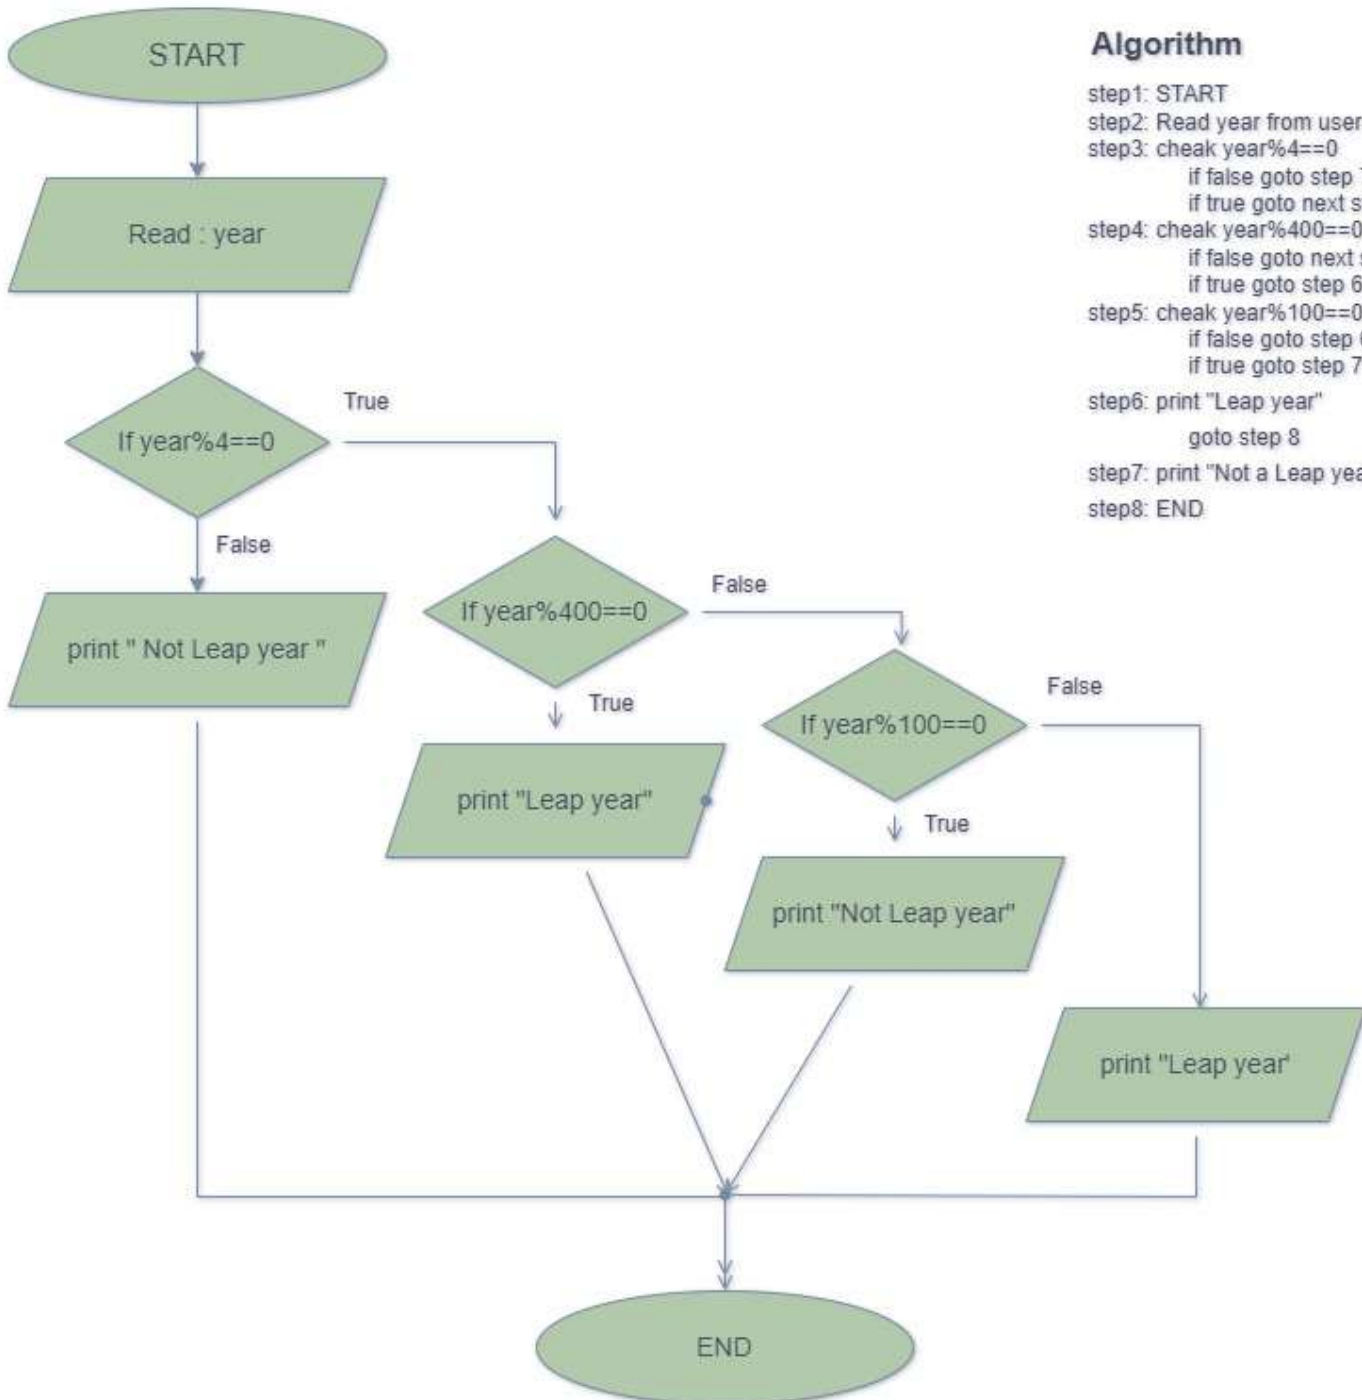

Algorithm

step1: START
step2: Read num
step3: check (num >= 0)
if false goto step 5
if true goto next step
step4: Print : "Number is positive"
step5: Print : "Number is Negative"
step6: END

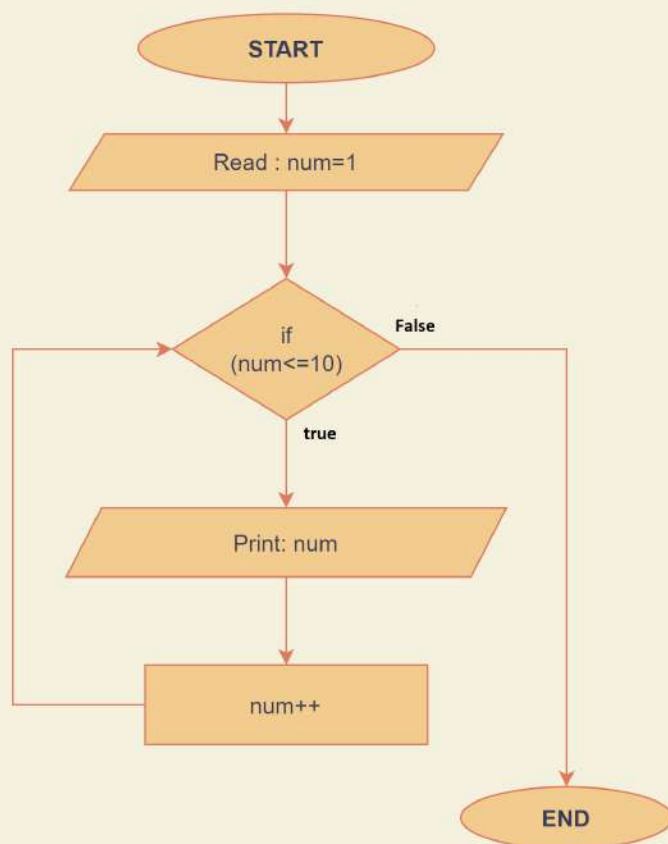

Q6 Write a java program find wheather a given year is leap year or not

Algorithm

```
step1: START
step2: Read year from user
step3: cheak year%4==0
        if false goto step 7
        if true goto next step 4
step4: cheak year%400==0
        if false goto next step 5
        if true goto step 6
step5: cheak year%100==0
        if false goto step 6
        if true goto step 7
step6: print "Leap year"
        goto step 8
step7: print "Not a Leap year"
step8: END
```

Q.7) write a algorithm and flowchart for Print 1 to 10 number Without using Loop.

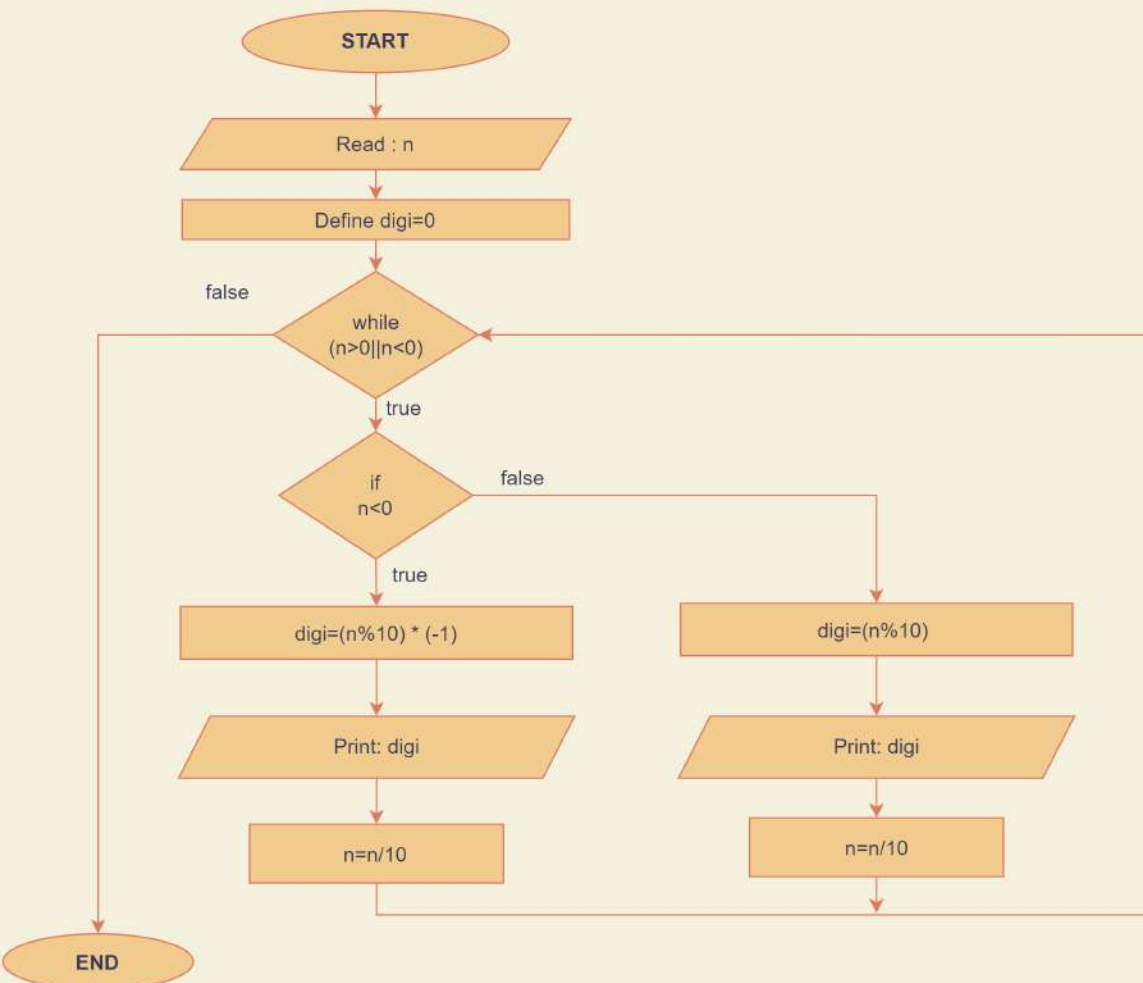

Algorithm

step1: START
step2: Read num=1
step3: check (num<=10)
 if false goto step 6
 if true goto next step
step4: Print :num
step5: increment num by 1
 and goto step 3
step6: END

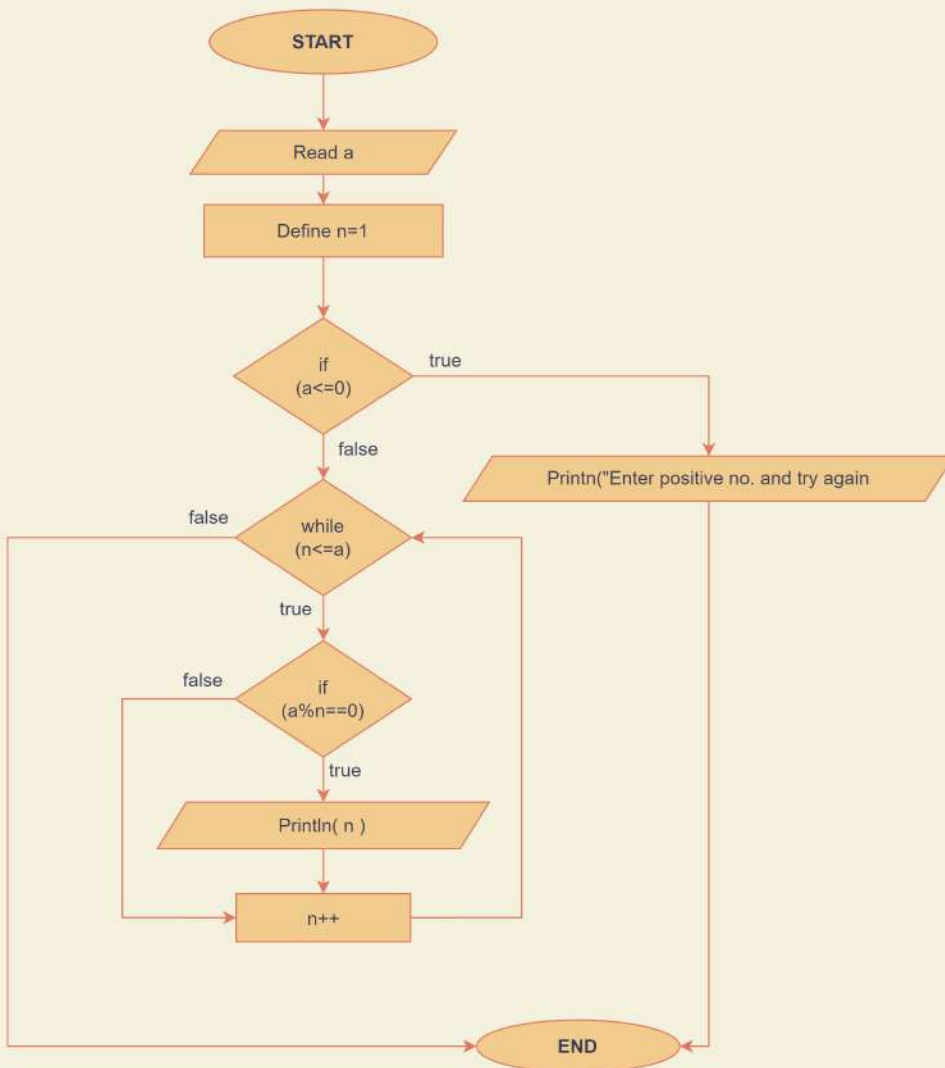

Q.8) write a algorithm and flowchart for Print the digits of a given number.

Algorithm

step1: START
 step2: Read n
 step3: Define digi=0
 step4: check while (n>0||n<0)
 if false goto step 12
 if true goto next step
 step5: check n<0
 if false goto step 9
 if true goto next step
 step6: digi=(n%10) * (-1)
 step7: Println : digi
 step8: n=n/10
 and goto step 4
 step9: digi=(n%10)
 step10: Println : digi
 step11: n=n/10
 and goto step 4
 step12: END

Q.9) write algorithm and flowchart for To print all the factors of the given number.

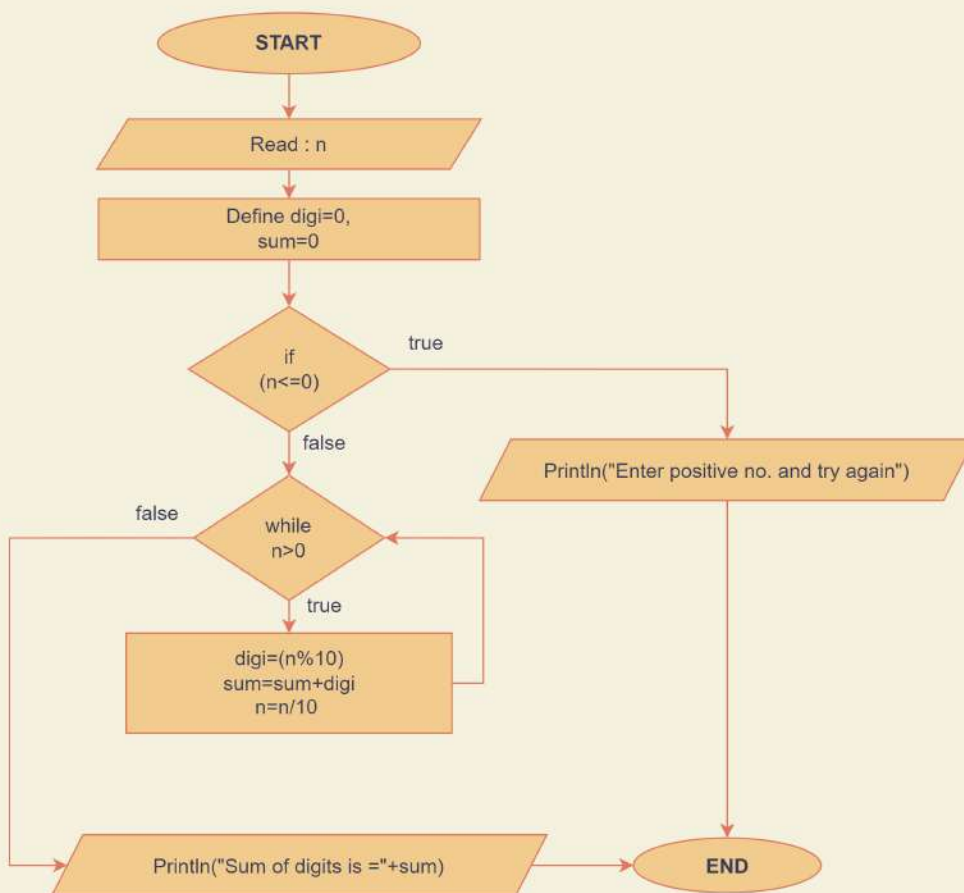

Algorithm

step1: **START**
step2: Read a
step3: Define n=1
step4: check (a<=0)
 if false goto step 6
 if true goto next step
step5: Println("Enter positive no. and try again")
 and goto step 10
step6: check condition while (n<=a)
 if false goto step10
 if true goto next step
step7: check (a%n==0)
 if false goto step 9
 if true goto next step
step8: Println(n)
step9: increment n by 1
 and goto step 6
step10: **END**

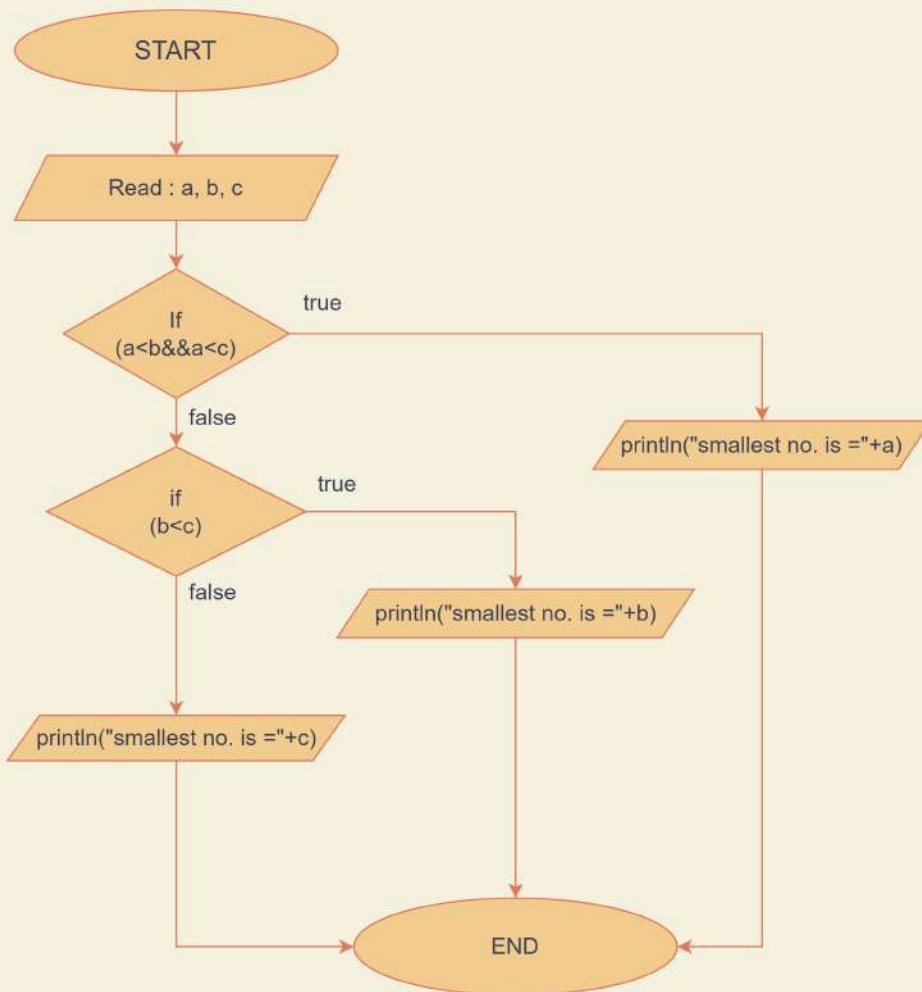

Q.10) write a algorithm and flowchart for Find the sum of the digits of given number.

Algorithm

step1: START
step2: Read n
step3: Define digi=0, sum=0
step4: check (n<=0)
if false goto step 6
if true goto next step
step5: Println("Enter positive no. and try again")
and goto step 9
step6: check while (n>0)
if false goto step 8
if true goto next step
step7: digi=(n%10)
sum=sum+digi
n=n/10
and goto step 6
step8: Println("Sum of digits is "+sum)
step9: END

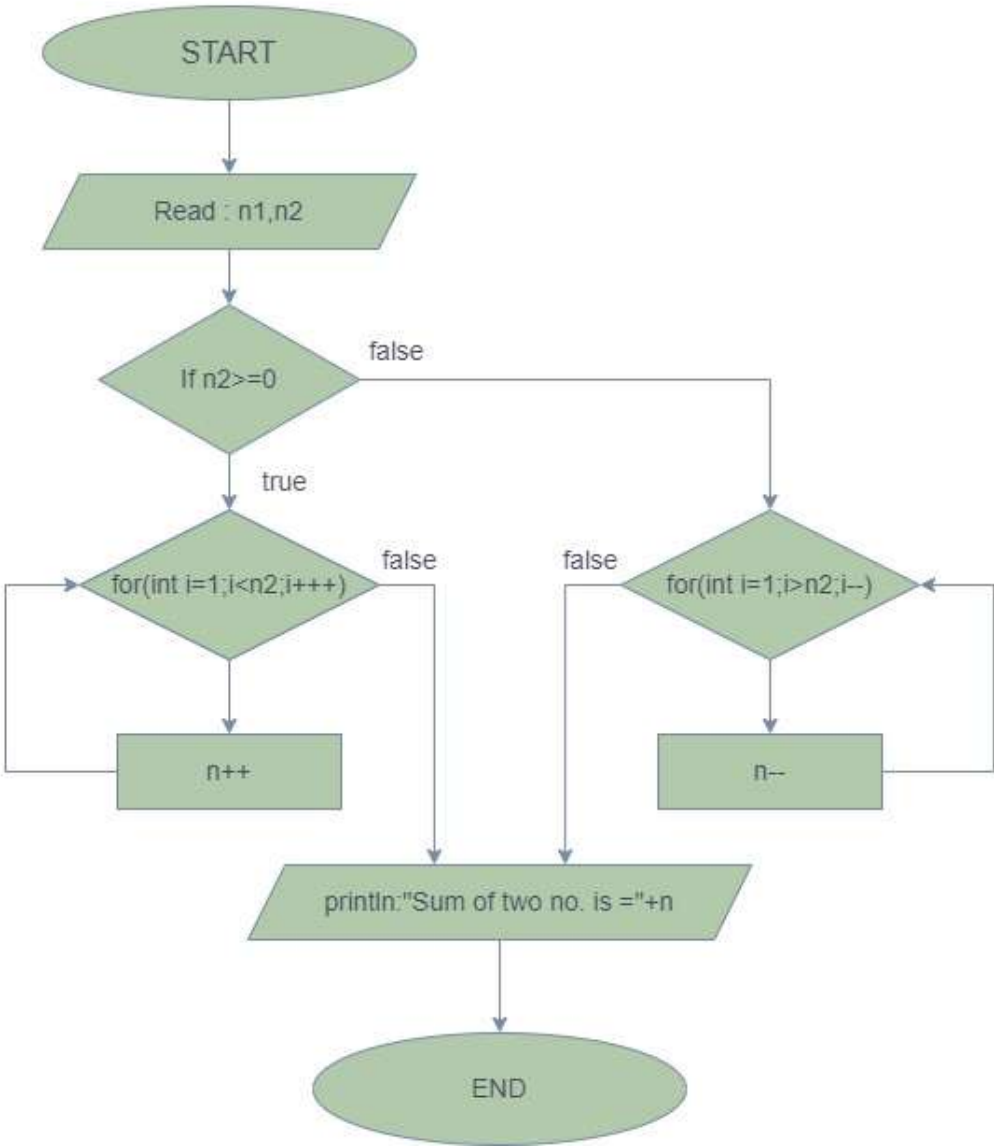

Q.11) write algorithm and flow chart for To Find the smallest of 3 numbers (a,b,c).

Algorithm

step1: START
step2: Read a, b, c
step3: check (a,b&&a<c)
if false goto step 5
if true goto next step
step4: Println("smallest no. is "+a)
and goto step 8
step5: check condition (b<c)
if false goto step 7
if true goto next step
step6: Println("smallest no. is "+b)
and goto step 8
step7: Println("smallest no. is "+c)
step8: END

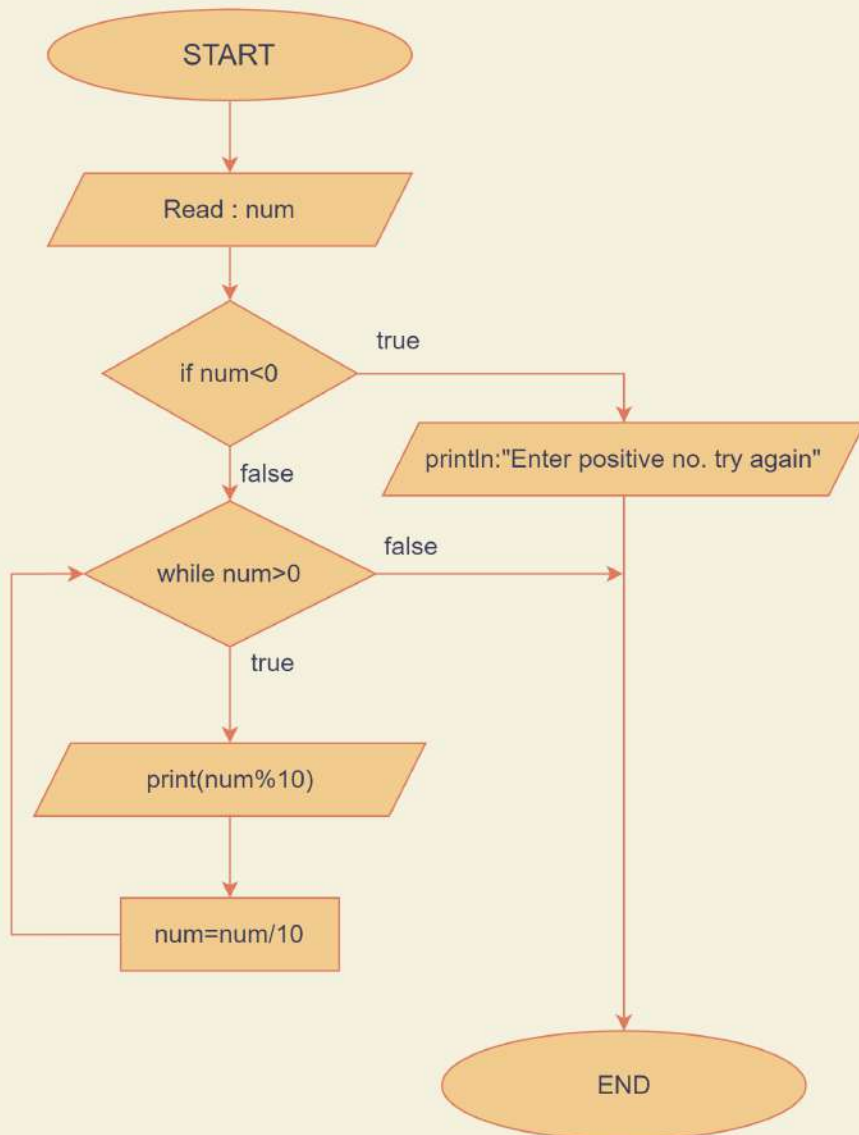

Q.12) write a algorithm and flow chart for add two numbers without using the arithmetic operators

Algorithm

- step1: START
- step2: Read n1, n2
- step3: check $n2 \geq 0$
 - if false goto step 6
 - if true goto next step
- step4: define the $i=1$, take loop upto $i < n2$ and check condition $i < n2$
 - if false goto step 8
 - if true goto next step
- step5: increment $n1$ by 1
- step6: define the $i=1$, take loop upto $i > n2$ and check condition $i > n2$
 - if false goto step 8
 - if true goto next step
- step7: decrement $n1$ by 1
- step8: `Println:"Sum of two no. is="+n1`
- step9: END

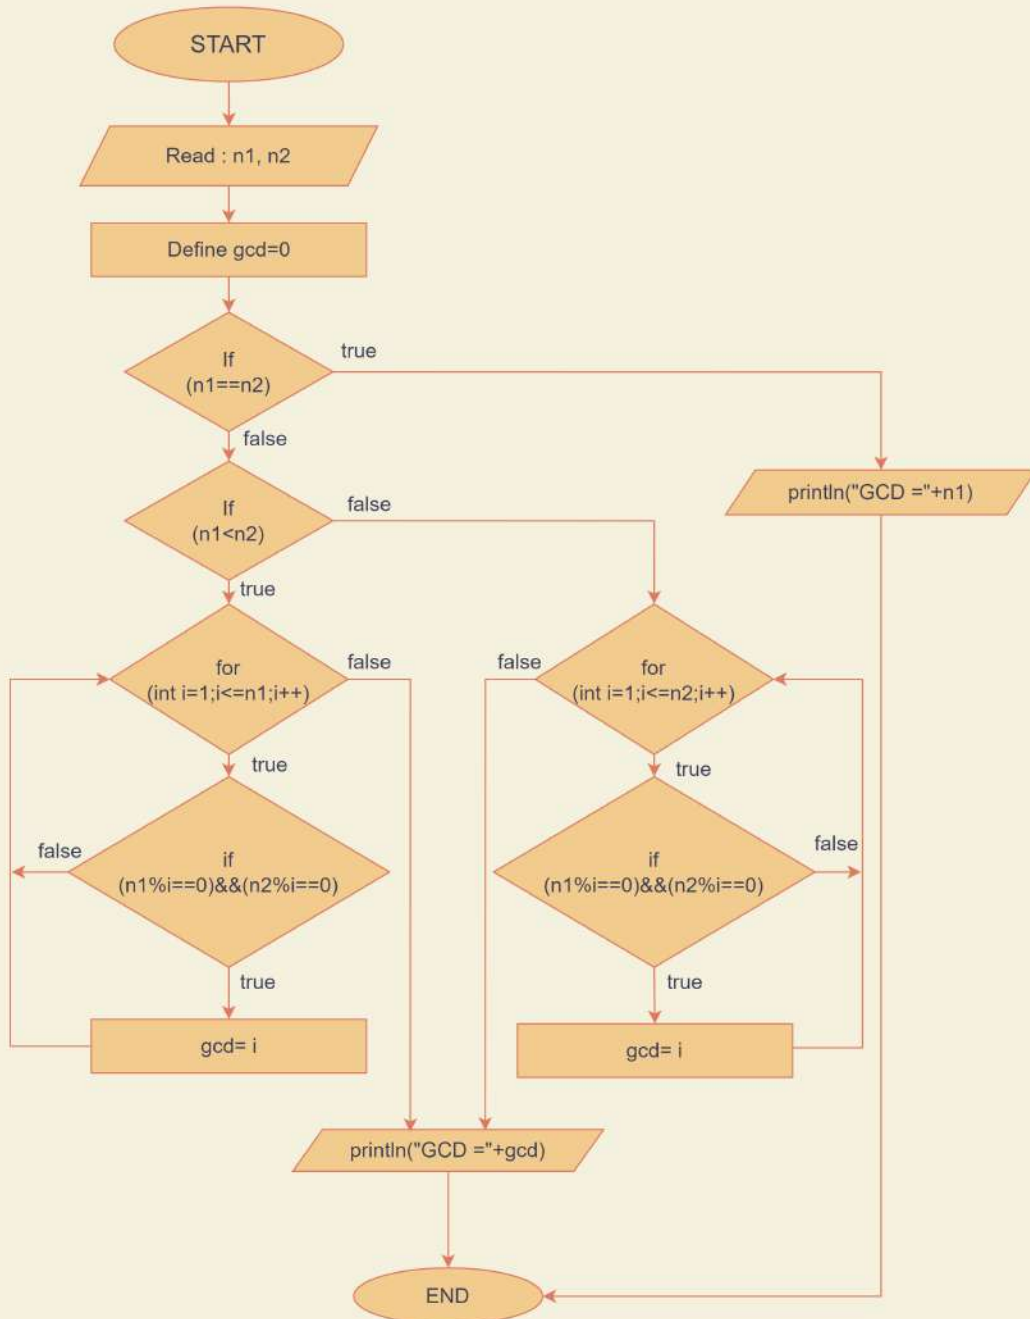

Q.13) write a algorithm and flow chart for Reverse a given number.

Algorithm

step1: START
step2: Read num
step3: check $\text{num} < 0$
 if false goto step 5
 if true goto next step
step4: println: "Enter positive no. try again"
 goto step 8
step5: check $\text{num} > 0$
 if false goto step 8
 if true goto next step
step6: Print $(\text{num} \% 10)$
step7: $\text{num} / 10$ and store num
 goto step 5
step8: END

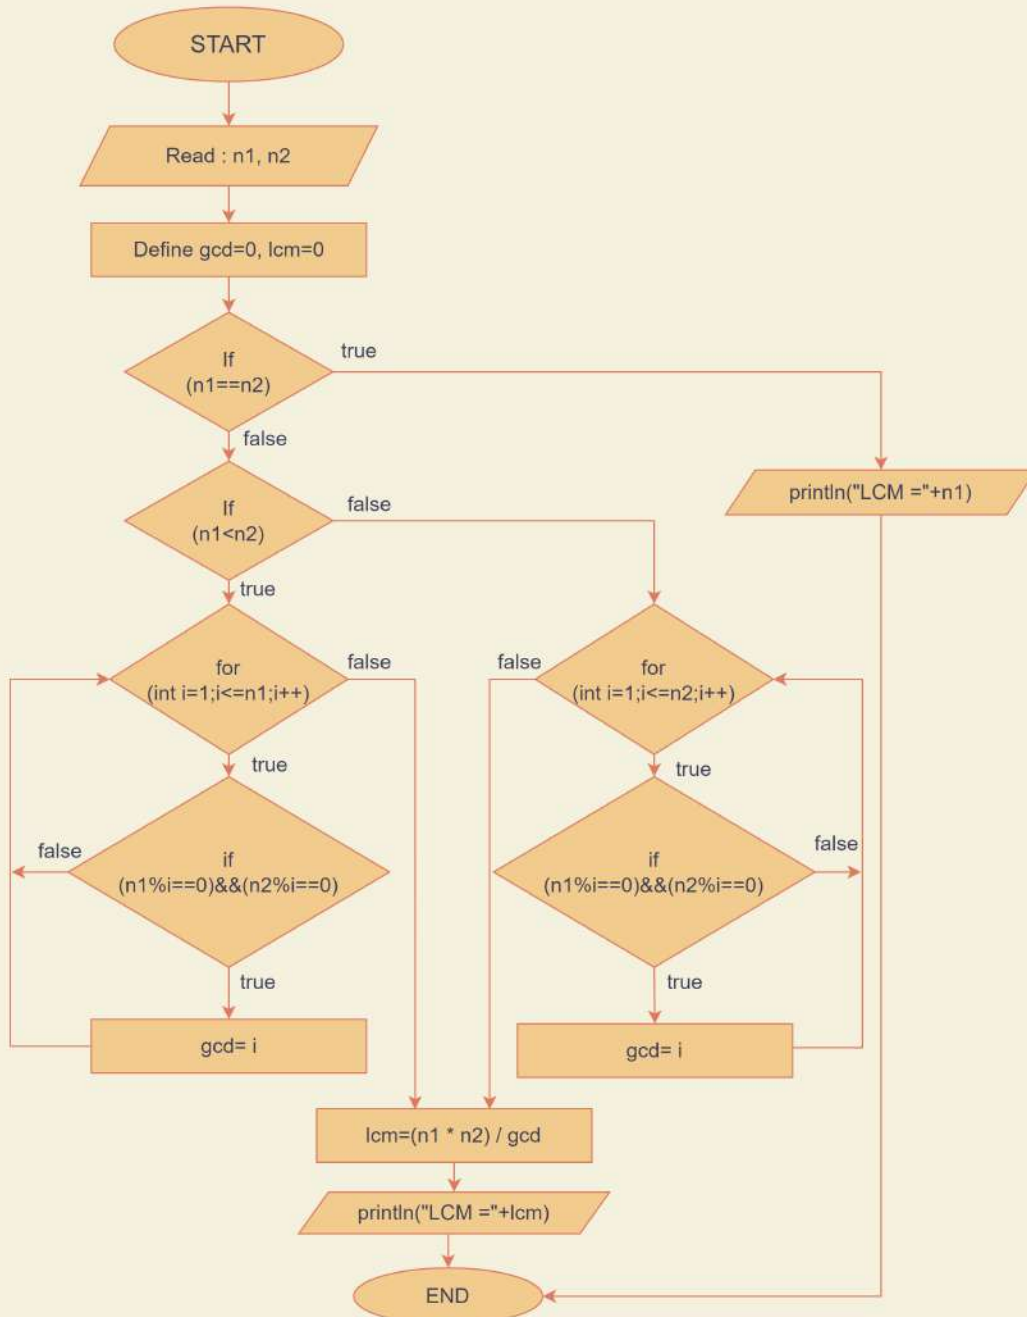

Q.14) write algorithm and flowchart for To Find the GCD of two given numbers.

Algorithm

step1: **START**
 step2: Read n1, n2
 step3: Define gcd=0
 step4: check (n1==n2)
 if false goto step 6
 if true goto next step
 step5: Println("GCD =" + a)
 and goto step 14
 step6: check condition (n1<n2)
 if false goto step 10
 if true goto next step
 step7: Define i=1, check(i<=n1), inc i++
 if false goto step 13
 if true goto next step
 step8: check (n1%i==0)&&(n2%i==0)
 if false goto step 7
 if true goto next step
 step9: store gcd= i
 and goto step 7
 step10: Define i=1, check(i<=n2), incre i++
 if false goto step 13
 if true goto next step
 step11: check (n1%i==0)&&(n2%i==0)
 if false goto step 10
 if true goto next step
 step12: store gcd= i
 and goto step 10
 step13: Println("GCD =" + gcd)
 step14: **END**

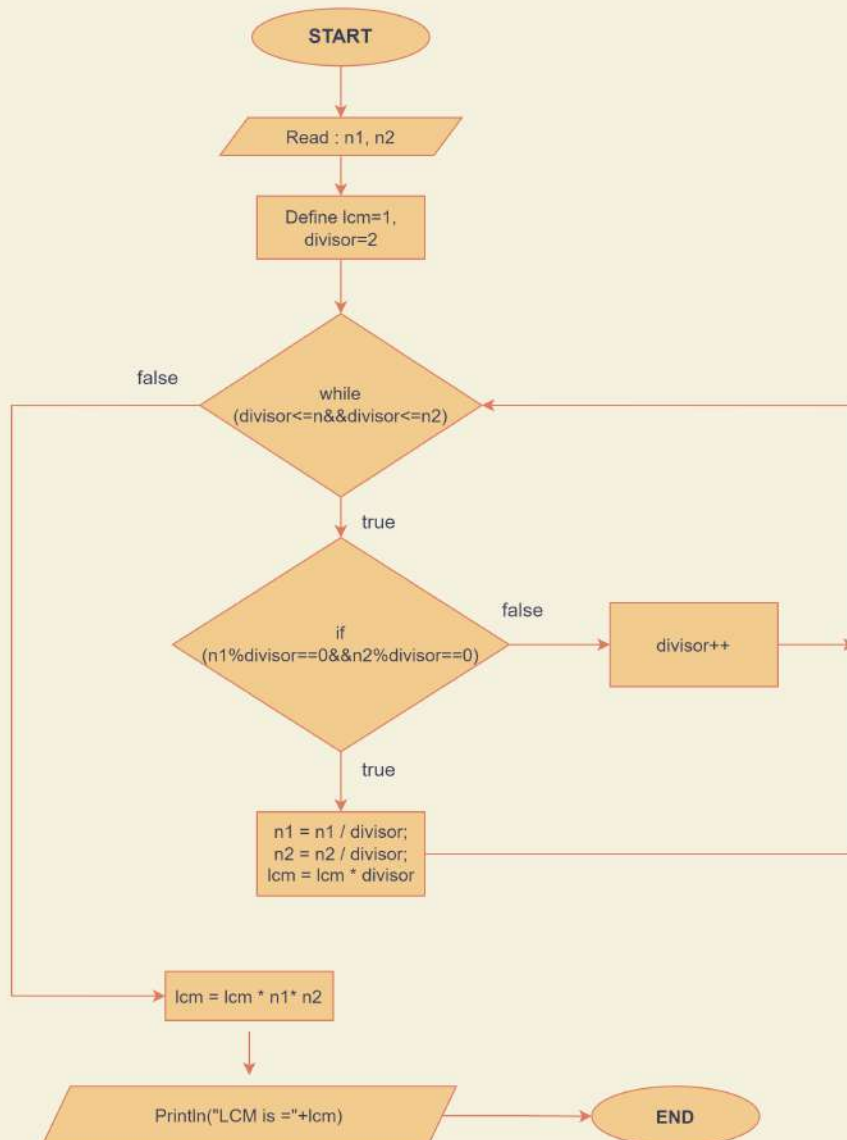

Q.15) write algorithm and flowchart for To LCM of two given numbers.

Algorithm

step1: **START**
 step2: Read n1, n2
 step3: Define gcd=0, lcm=0
 step4: check (n1==n2)
 if false goto step 6
 if true goto next step
 step5: Println("LCM =" + n1)
 and goto step 14
 step6: check condition (n1<n2)
 if false goto step 10
 if true goto next step
 step7: Define i=1, check(i<=n1), inc i++
 if false goto step 13
 if true goto next step
 step8: check (n1%i==0)&&(n2%i==0)
 if false goto step 7
 if true goto next step
 step9: store gcd= i
 and goto step 7
 step10: Define i=1, check(i<=n2), incre i++
 if false goto step 13
 if true goto next step
 step11: check (n1%i==0)&&(n2%i==0)
 if false goto step 10
 if true goto next step
 step12: store gcd= i
 and goto step 10
 step13: lcm=(n1 * n2) / gcd
 step14: Println("LCM =" + lcm)
 step15: **END**

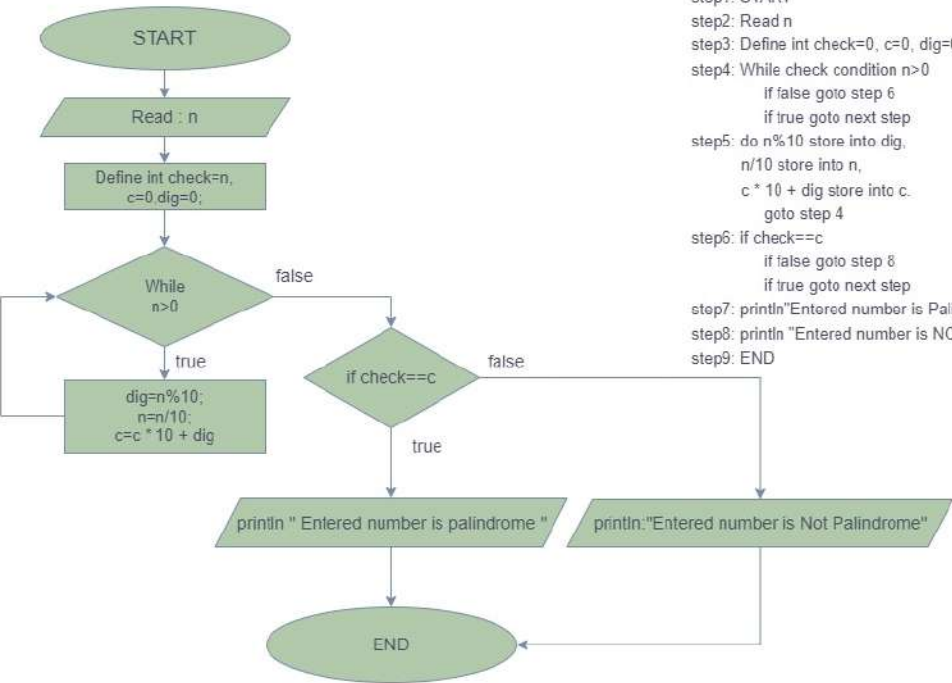

Q.16) write algorithm and flowchart for To LCM of two given numbers using the Prime factors method.

Algorithm

step1: START
 step2: Read n1, n2
 step3: Define lcm = 1, divisor = 2
 step4: check condition while (divisor<=n1&&Divisor<=n2)
 if false goto step 8
 if true goto next step
 step5: check (n1%divisor==0&&n2%divisor==0)
 if false goto step 7
 if true goto next step
 step6: n1 = n1 / divisor;
 n2 = n2 / divisor;
 lcm = lcm * divisor;
 and goto step 4
 step7: increment divisor++
 and goto step 4
 step8: lcm = lcm * n1 * n2
 step9: Println("LCM is "+lcm)
 step10: END

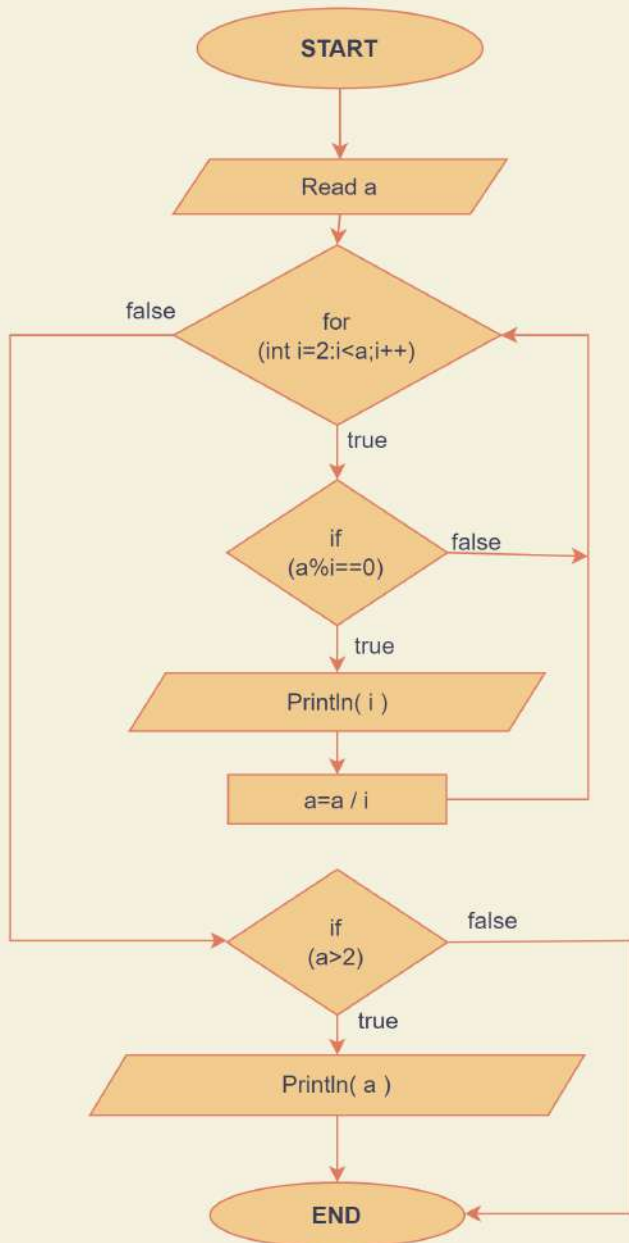

Q.17) write a algorithm and flowchart for check the given no. is Palindrome or NOT

Algorithm

- step1: START
- step2: Read n
- step3: Define int check=0, c=0, dig=0
- step4: While check condition n>0
 - if false goto step 6
 - if true goto next step
- step5: do n%10 store into dig, n/10 store into n, c * 10 + dig store into c. goto step 4
- step6: if check==c
 - if false goto step 8
 - if true goto next step
- step7: println"Entered number is Palindrome"
- step8: println "Entered number is NOT Palindrome"
- step9: END

Q.18) write algorithm and flowchart for To print all the Prime factors of the given number.

Algorithm

step1: **START**

step2: Read a

step3: Define i=2 and check conditon(i<a) and i++

if false goto step 7

if true goto next step

step4: check (a%i==0)

if false goto step 3

if true goto next step

step5: Println(i)

step6: a = a / i and goto step 3

step7: check (a>2)

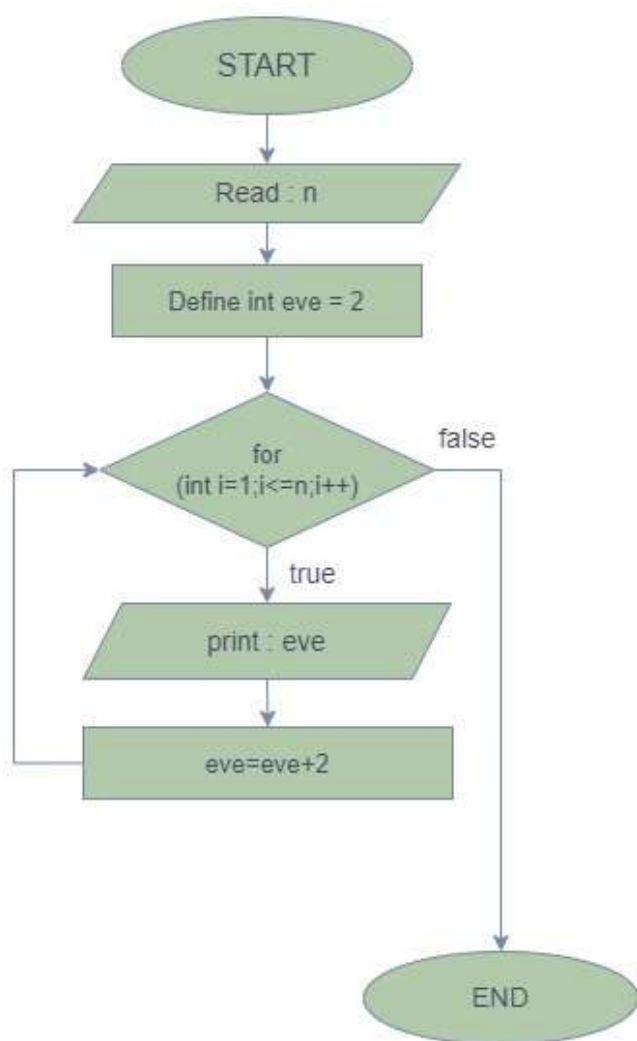

if false goto step 9

if true goto next step

step8: Println(a)

step9: **END**

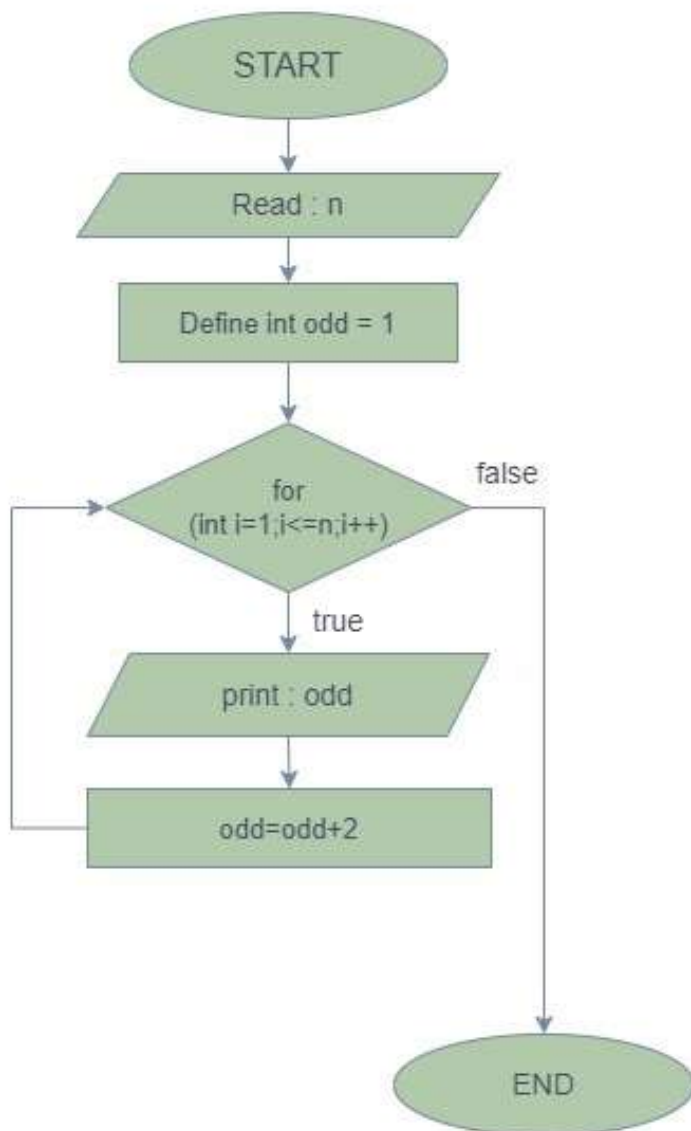

Q.19) write a algorithm and flowchart for To print the EVEN number series 2 4 6 8 10n

Algorithm

step1: START
step2: Read n
step3: Define int eve=2
step4: for int i=1 check condition $i \leq n$ and increment $i++$
if false goto step 7
if true goto next step
step5 print : eve
step6: increment $eve=eve+2$
step7: END

Q.20) write a algorithm and flowchart for To print the ODD number series 1 3 5 7 9 n

Algorithm

step1: START
step2: Read n
step3: Define int odd=1
step4: for int i=1 check condition $i \leq n$, and increment $i++$
if false goto step 7
if true goto next step
step5: print : odd
step6: increment $odd = odd + 2$
goto step 4
step7: END
